Dear Families,

As we head into summer, we want to emphasize the importance of continued math practice to help your student maintain and build on the progress they made this year. Regular review over the summer can make a meaningful difference in confidence and readiness for the next grade level.

Your student will receive a summer math packet. To make this work most effective, we strongly encourage students to complete **one page per week** rather than waiting and finishing the entire packet at once. Spacing the practice out helps reinforce skills, supports long-term retention, and prevents unnecessary frustration.

Please note that the completed packet will be **due to your student's math teacher during the first week of the new school year**.

In addition to the packet, ongoing fact practice is essential:

- **Incoming 3rd graders** should continue practicing **addition and subtraction facts** to build fluency.
- **Incoming 4th and 5th graders** should focus on strengthening their **multiplication and division facts**, as these are foundational for upcoming math concepts.

Another helpful resource is **IXL**, which can support your child by targeting their individual skill needs and providing personalized practice. It is a great way to reinforce concepts and build confidence over the summer.

Thank you for your support in helping your child stay engaged with learning over the summer. A little consistent practice goes a long way!

Please feel free to reach out if you have any questions.
